EDUCATION

- **BSc Computer Science** University of Exeter
Achieved a 2:1 2022-2025
- **A Levels** Sandringham School
Computer Science (A), Maths (A*), Further Maths (B) & Physics (B)* 2020-2022

EXPERIENCE

- **Computer Science Tutor** St Albans, UK
Sandringham School April 2021 - May 2021
 - Tutored younger students in computer science, using effective communication to explain programming concepts and guide students through coding challenges and debugging.
 - Adapted explanations to different learning styles, helping build their confidence and problem-solving abilities.

PROJECTS

- **Automated Clinical Coding:** Python, Pandas, Transformers, Pytorch, Scikit-learn, Git
 - Integrated clinical knowledge into LLaMA-3 prompts using a binary decision tree for ICD code predictions.
 - Built a clinical NLP pipeline by integrating data from three MIMIC subsets for hierarchical diagnosis classification.
- **Music-Identifier Microservices:** Python, REST API, SQL, Audd.IO API, JSON, Git
 - Developed RESTful audio identification services integrating Audd.IO API and SQLite metadata storage.
 - Built clean REST interfaces with full status code coverage and robust end-to-end tests.
- **Atmospheric Advection Simulation:** C, OpenMP, Git
 - Implemented 2D finite difference solver with forward Euler stepping and modelled vertical wind shear.
 - Parallelised core computational loops with OpenMP for multi-core performance; generated output files.
- **Customer Segmentation for E-Commerce:** Python, Pandas, Scikit-learn, Matplotlib, Git
 - Applied K-Means clustering with optimal k via Elbow method; performed feature selection and scaling.
 - Visualised clusters and inertia curves to communicate insights effectively.
- **MLP for Defaulting Credit Cards:** Python, Pandas, Numpy, Keras, Scikit-learn, Matplotlib, Git
 - Designed Multi-Layer Perceptron addressing class imbalance; used L2 regularisation and batch normalisation.
 - Created visualisations to analyse results and ensure model robustness.
- **Event Management Database:** SQL, Git
 - Designed ER diagrams and translated to normalised relational schemas with justified constraints.
 - Executed complex SQL queries including conditional deletions and updates; documented clearly.
- **Pairs Game Website:** SQL, PHP, HTML, CSS, JavaScript, Linux, Apache, Microsoft Azure, Git
 - Built dynamic web app using LAMP stack with frontend in HTML, CSS, and JavaScript.
 - Deployed on Microsoft Azure VM and managed source control with Git.
- **Code-to-Collect Web App:** HTML, CSS, JavaScript, Python, Django, Git
 - Collaborated in a team to develop the web app; resolved Git merge conflicts and coordinated code integration.
 - Built a custom isometric grid system for object layering, collision detection, and movement in JavaScript.

TECHNICAL SKILLS

- **Languages:** Python, SQL, Java, C#, C++, C, JavaScript, HTML, CSS, Bash
- **Developer Tools:** Git, VS Code, Jupyter Notebook, MYSQL Workbench, pgAdmin, MS Azure, Django, REST, Audd.io
